

Slide 1 - Slide 1

Welcome to the course: **CareEvolve Results Viewing and Printing**. OhioHealth Laboratory Services partners with CareEvolve to bring you the OhioHealth Laboratory Services Results Portal. You may hear the names CareEvolve and the OhioHealth portal used interchangeably.

At the conclusion of the course, you will be able to view your patient's laboratory results at your location in the CareEvolve application and learn how to print your patient's laboratory results. You will also be given support resources for any of your CareEvolve issues.

Click anywhere to continue.

CASE REPORT
Surgical Pathology Report Case: SRM15-32349
Authorizing Provider: John David Leff, MD Collected: 12/01/2015
Pathologist: Christopher A. Hauer, MD Received: 12/01/2015 05:05 PM
Specimens: Back, back cyst

FINAL DIAGNOSIS
Skin cyst, excision:
Benign skin with organizing fibrosis.
CAH/spd

CLINICAL INFORMATION
L72.0 back cyst.

GROSS DESCRIPTION
Received in formalin labeled Bevinger Gibson, Mary Ann and not designated is an unoriented elliptical excision of skin that measures 2.6 x 1.2 x 1.2 cm. Centrally the skin is slightly depressed and umbilicated. Sectioning through the area of depression shows possible tan cystic areas surrounded by tan, firm, fibrous tissue. The remainder of the cut surface is unremarkable. Four representative central sections including the area of depression are submitted in A1. 4/1.

Clinical Information: abd pain
CT ABDOMEN AND PELVIS WITH IV CONTRAST 07/08/2013
COMPARISON: Right upper quadrant ultrasound 02/20/2013.
HISTORY: Pain.
TECHNIQUE: Axial images were obtained through the abdomen and pelvis following the intravenous administration of 75 ml Omnipaque 350. Coronal reconstructions were performed.
FINDINGS: The patient is status post cholecystectomy. There is a small hiatal hernia.
The liver, spleen, pancreas, adrenal glands, and kidneys are unremarkable.
The small bowel and the colon are normal in caliber. No intraperitoneal free air or free fluid. The appendix is normal. No focal inflammatory changes are identified within the abdomen. There is no abnormal fluid collection.
The abdominal aorta is normal in caliber.
There are a few scattered colonic diverticula present.
CT PELVIS: There are multiple pelvic phleboliths present. This limits the sensitivity for distal
